

Enhance cyber resilience with Computacenter and IBM

As cybersecurity threats continue to grow, so must the defences against them. Cyber resilience needs to be built into every IT environment, particularly data storage. Computacenter and IBM help organisations protect their data, increase resilience and safeguard business continuity with encryption, immutable storage, and rapid recovery capabilities.

Computacenter

Customer drivers

Cyber resilience is not just about protecting against cyber-attacks, but maintaining business continuity when a threat inevitably breaches your operations.

With data distributed across on-premises data centers, co-location sites, containers, and the cloud, it's ever more challenging to establish a rapid response to security breaches and effective disaster recovery planning.

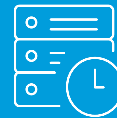

Computacenter and IBM solution

Computacenter and IBM help organisations improve business continuity with storage solutions that include inbuilt cyber resilience capabilities.

For example, IBM Storage FlashSystem features AI-powered ransomware threat detection, data encryption and immutable backups, so organisations can safeguard data regardless of its location.

Computacenter helps organisations optimise their use of these features to enable faster recovery and greater data availability in the event of a cyber-attack.

Improve cyber resilience and safeguard business continuity

- Detect threats before operational impact with AI-powered algorithms
- Safeguard confidential data and intellectual property with automated encryption
- Mitigate ransomware threats with immutable storage
- Enable faster recovery from security incidents

Computacenter and IBM's strategic cyber resilience services include:

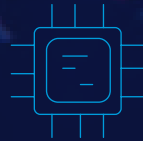

Storage Assessment

Through a series of technology reviews, workshops, and stakeholder interviews, we'll investigate your current storage capabilities and make recommendations that will enhance security, resilience, and scalability, and align with your organisational strategy.

Disaster Recovery

We can help you develop strategies and deploy solutions that minimise recovery time and protect data in line with shifting business and regulatory landscapes.

With Computacenter and IBM, organisations can identify threats faster, respond to them rapidly and recover swiftly, ensuring business continuity even in the event of a cyber-attack.
